EDUCATION

B.Sc. Computer Science, R.B Narayanrao Borawake, Savitribai Phule Pune University 2022–2025

TECHNICAL SKILLS

Languages: Python, SQL,C,C++
Security Tools: Burp Suite, Nmap, Wireshark, Metasploit Framework, OWASP ZAP, Nikto, Gobuster, Dirsearch
Operating Systems: Kali Linux, Ubuntu, Cent OS
Security Domains: Ethical Hacking, Vulnerability Assessment & Penetration Testing (VAPT), Web Application Security Testing, Android Application Security Testing, OWASP Top 10, Network Security

EXPERIENCE

Cyber Security Intern | IT Roots Pvt. Ltd. Feb 2026 – Present

- Learning and applying industry-standard security tools including Burp Suite, Nmap, Wireshark, Metasploit Framework, OWASP ZAP, Nikto, Gobuster, and Dirsearch in lab environments.
- Performing web application and Android application security testing to identify common vulnerabilities and security misconfigurations.
- Conducting reconnaissance, information gathering, network scanning, and traffic analysis using various security assessment tools.
- Gaining hands-on experience in vulnerability identification, validation, documentation, and remediation practices.
- Working with Linux-based environments (Kali Linux and Ubuntu) for security testing and analysis.
- Developing knowledge of OWASP Top 10 vulnerabilities, secure coding practices, and web application security concepts.
- Participating in cyber security labs, security assessments, and practical exercises to strengthen offensive and defensive security skills.

PROJECTS

Password Security Lab | Python, Flask -Duration: 1 Month

- Developed an interactive cybersecurity web application to demonstrate password security concepts and secure authentication practices.
- Implemented SHA-256 hashing functionality and password strength analysis based on multiple security parameters.
- Integrated entropy calculation to evaluate password randomness and predict resistance against guessing attempts.
- Designed a responsive cyber-themed user interface with real-time security recommendations for users.

Tools: Python, Flask, HTML, CSS, Bootstrap

Phishing URL Detector | Python, Flask -Duration:- 1 Month

- Developed a web-based phishing detection system to analyze URLs and classify potential security risks.Developed **CRUD operations, joins, aggregations, and filtering queries** for efficient data management.
- Implemented URL analysis techniques including HTTPS validation, suspicious keyword detection, and structural pattern analysis.Optimized SQL queries and generated business reports for sales and transaction analysis.
- Built a risk-scoring mechanism to categorize URLs into Low, Medium, and High risk levels.
- Designed an interactive dashboard with a modern cyber security-focused UI for real-time URL scanning.

Tools: Python, Flask, HTML, CSS, Bootstrap

CERTIFICATIONS

• Cyber security Basics | Cybrary | June 2026
Topics Covered: Cyber security fundamentals, threat awareness, security concepts, risk management, and basic defensive practices

ACHIEVEMENT

- Successfully completed Cyber security Basics training from **Cybrary** with practical understanding of cyber security fundamentals and threat awareness.
- Developed cybersecurity-based projects including Password Security Lab and Phishing URL Detector using Python and Flask.
- Applied secure coding concepts and implemented password security analysis and phishing detection techniques in web applications.
- Demonstrated practical implementation of Python, Flask, HTML, CSS, and security concepts in real-world projects.
